GEODI - MOBIDI

Use Cases

Sample Projects

DECE

Having specific designs and features GEODI and MOBIDI can be used in many different areas.

You can develop lots of solutions on GEODI and MOBIDI. Having advanced search features GEODI works on available data, does not require any manual data entry, generates maps automatically, and as a result strengthens team work.

We share a few examples for informational purposes.

Digital Archive

Digital Archive is an important step in the process of digitization, and GEODI creates Digital Archive in the easiest way. "Just scanning documents is enough!". The rest will be done by GEODI.

Addresses, Land-Parcel Numbers, Site Names, Location information or your customers... GEODI interprets all this information and draws them on the map automatically.
You don't need a service or software for the zoning archive or your customers map!

So you do not enter metadata (index). Entering each document one by one, selecting folders, writing dates, writing parcel numbers and so on... All these works are done by GEODI.

We solve many problems efficiently and effectively in days or weeks that normally take months / years and cost a lot with classical approaches.
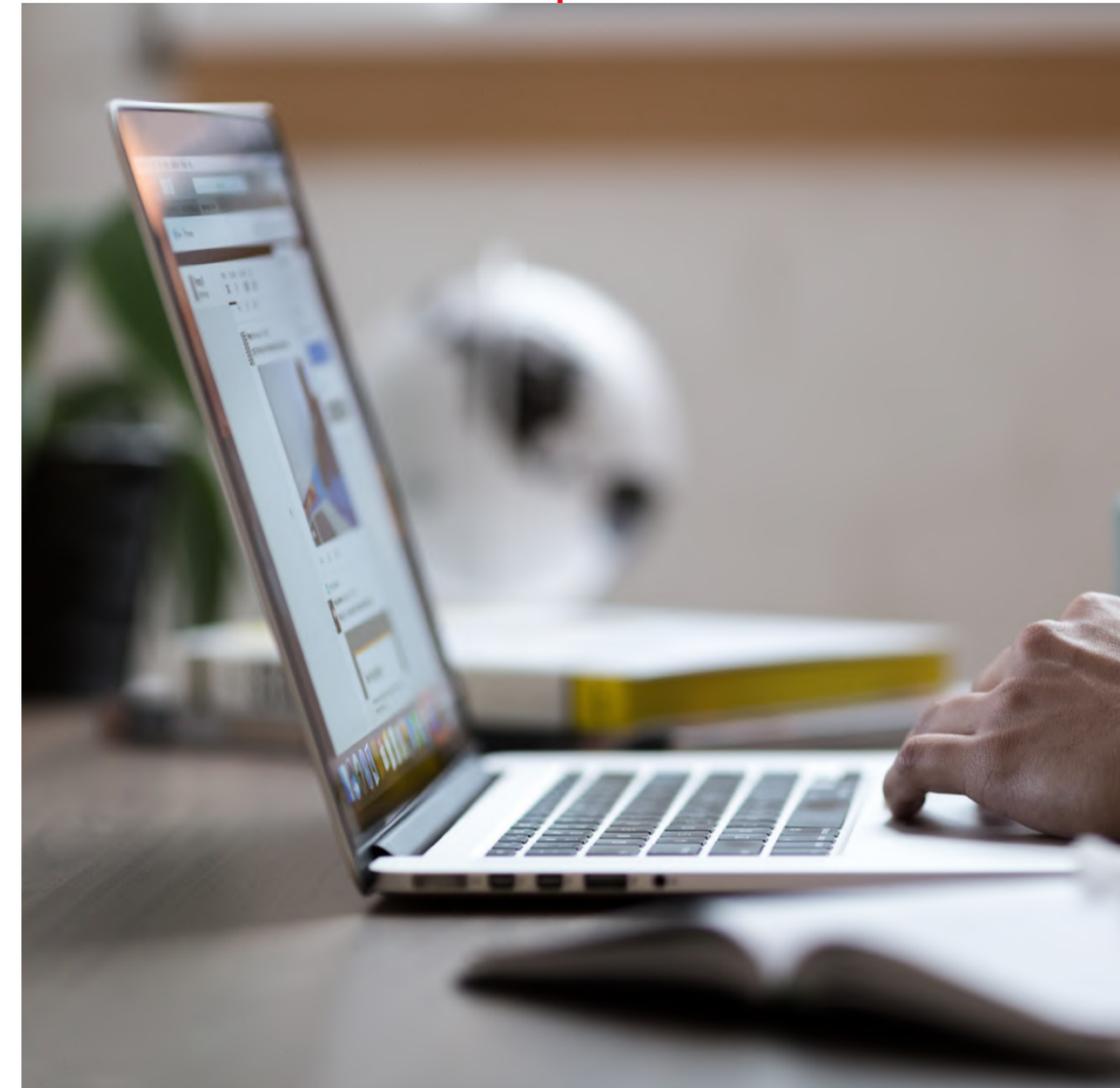

Enterprise Search

Enterprise Search is one of the most basic needs of all institutions and organizations.

You can find and reach any information in internal documents or catalogs or designs on your website or on your e-commerce site with advanced search features of GEODI.

MuniPedia
Municipality Solutions

With MuniPedia, municipal units can access all information from a single point. With this system that everyone can use, including the president, the information flow and decision-making process is accelerated and the coordination between the units is maximized.

With mobile solutions any data collected in the field comes to the office instantly.

Munipedia also provides a single point of service for citizens. Transportation, Tourism, Municipal Services, Events and more are presented in one and integrated way.

With the GEODI Modules TrafficPro and ImagePro, automatic traffic sign inventory and urban furniture inventory are created automatically, and road defects are detected easily.

MediaMon
Social Media Monitoring

You can watch applications such as Facebook, Twitter and Instagram for various purposes. You can do brand management, or listen to the voice of citizens.

Messages from social media are automatically read, evaluated with the information from other sources and transformed into work orders and mapped automatically.

You can track Hashtags and mentions and get the statistics out of them. You can get daily, weekly and monthly reports automatically.
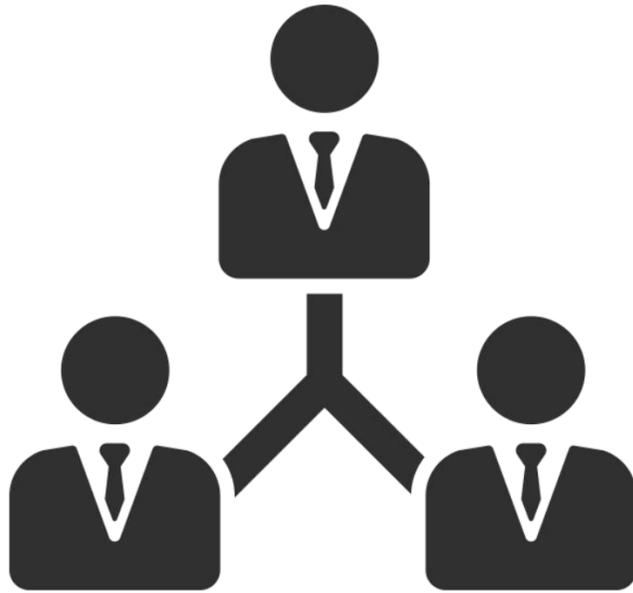

Press and Public Relations

An intelligent archive solution is required for thousands of photos, videos, news and more. The archive solution created with GEODI not only provides access to information, but also automatically places the archive on the map.

That's not all. We also recognize people from photos and videos with FacePro. In this way, you not only reach all the photos of the person you are looking for but also the relevant moments of the video.

Survey

Survey is one of the easiest tasks carried out by MOBIDI. Prepare the form you want, send it to the mobile devices of the interviewers, analyze with time and place as the survey is conducted. Update questions easily at any time. All in one package!

Aksaray Municipality conducts a project called "Belediye Kapımda" with MOBIDI. This project monitored the expectations of the citizens, and collects the requests and complaints with face to face meetings.
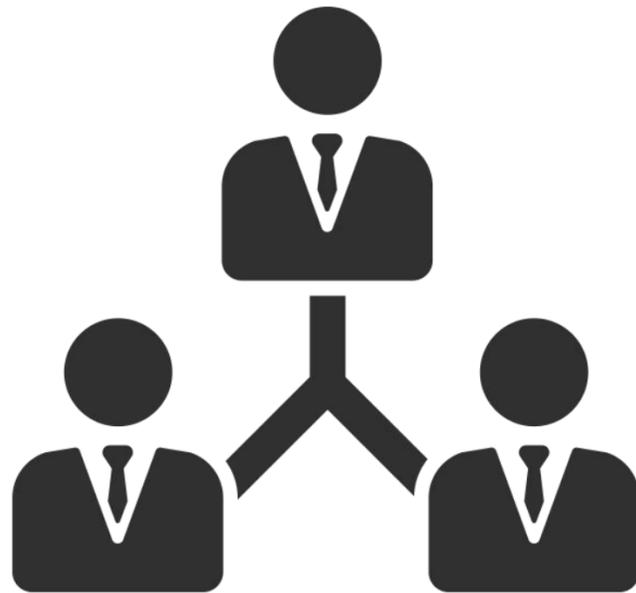

eDiscovery
Law and Related Fields

Thousands of documents... all need to be read in a short time. Names, places, quantities and much more information need to be extracted. You may be a General Manager, Inspector, Attorney, Prosecutor or Independent Auditor, but the need is similar...

Discovery Module serves exactly for this purpose. Without prior knowledge, it extracts people names, ID numbers, legal terms and more automatically, associates realated documents with each other and presents them to you.

A solution that you can use with your team and your clients. Take notes on documents, assign tasks, and more.

We should also include the features such as tracking legislation, your personal library, monitoring the websites you want, viewing specific files, and accessing mobile media.

Construction

Both MOBIDI and GEODI have extensive use in the construction industry. It is the only solution that can be used by project teams, purchasing teams, top management and stakeholder companies also covering CAD drawings and daily automatic reportings of site teams.

It might be difficult to associate our products with facial recognition, but we know that they are very closely related. We recognize faces from photos and videos in media such as press release archive, news archive, or media, and we match the same people with news or other textual documents.

This is the most important difference of our solution from the face recognition tools that work independently.

You can also use this solution from within other solutions. Let's talk about the possibilities of integration...

Another important difference is that people do not need to be known in advance to be recognized.
Our success rate is at international level and it is 100% our own solution.

Automatic Traffic Sign Inventory

Creating inventory and keeping it up to date has always been a challenging job. TrafficPro solves this issue in an easy and sustainable way. Videos that are recorded by continuously cruising vehicles are automatically processed daily or weekly, traffic signs are detected, and deficiencies are reported.

By using ImagePro, you can create inventory of other objects such as urban furniture. ImagePro is a GEODI solution that can also learn like our other products.

Interactive Documentation: CESSNA 172 Sample

By using GEODI's general purpose capabilities, you can transform your technical documents into interactive training with little effort. Here we used the documents of the CESSNA 172 aircraft.

You can do this interactive document transformation for a machine, a complicated electronic device, and many others.

An image and related documents of CESSNA - 712 were used in our live sample that you can access from our website. Two-three hours of time was sufficient to get the interactive documentation.

Sustainability

Sustainability is the basic design criterion of all our solutions.

Easy to use, form anywhere any time, everyone can use, no data entry, no matter what the existing data is, minimum system requirements, can be integrated with other systems.

Security

Security is another basic design criterion. Our solutions provide a secure environment for cyber security, data security and personal data protection.

Our solutions, are subjected to continuous penetration tests, and therefore they are at maximum safety.

With detailed logging features, you can see who has reached what data.

"

The examples are intended for general information.
