

LICENSING

Our licencing model designed to meet diverse end-user requirements and developers.

Licensing depends on some factors

- On-Premise or lease
- Number of concurrent users
- Number of Documents
- Add-ons

Update Policy

On-premise licencing has one year of guarantee. After a year a 20% of update fee is required to use up-to-date software.

Update is not mandatory.

Hardware

Hardware is customer responsibility. We do not offer a SaaS service yet.

Customers may utilize their own hardware or use **Azure** or any other PaaS service. Please check our web site for hardware requirements.

Price Calculation

Please use the worksheet we have shared with you

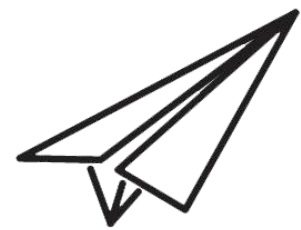

Training and Support

Our solutions need minimum maintenance and support. Video content is usually sufficient for end-user training.

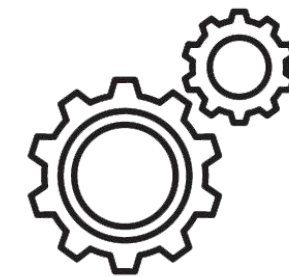

A one day training for system admins and supporting video content is usually sufficient. Our teams will give remote support in case you need.

Integration and Project

GEODI is ready to connect more than 200+ different sources.

Extra work may be required for integration to complex databases, web services or some other software.

Software integration should be analyzed in detail. Please check online API documentation and Engine documents.

The GEODI API is open and documented. To use this API, you need the GEODI Developer License.
